

Give debris a second life.

Our construction and demolition (C&D) waste and recycling services enable customers to dispose of bulky, heavy or large-quantity waste materials generated during the construction, renovation or demolition of buildings, roads and bridges.

STEP 1

Conduct a **waste audit** or assessment of the customer's C&D stream. Then, discuss the project plan, strategy, scope and schedule.

STEP 2

Provide **solutions sourcing** to procure vendors and determine end destinations to give recyclable materials most value.

STEP 3

Manage the **physical setup** of all vendor services, confirming equipment delivery and pickup schedules for each customer site.

STEP 4

Receive, process and confirm **service requests** through RUBICONConnect, Rubicon's customer app and web-based portal.

STEP 5

Consolidate **invoices processing** by capturing weights via tracking software, confirming accuracy and managing payments.

STEP 6

Generate **verified reporting** on consolidated raw data for tonnage of material diverted from the landfill, by location, for sustainability certifications.
