

Turn organic waste into valuable resources.

Rubicon's organics and food waste recycling services enable customers to recycle organic materials—including paper towels, oil and grease, and uneaten food—converting them into a rich compost or renewable energy.

STEP 1

Determine **volume and objectives** to evaluate local infrastructure, identify solutions, equipment, and service frequency.

STEP 2

Provide **sourcing** to procure vendors and end destinations, such as composting, anaerobic digestion, on-site technology, animal feed or food donation.

STEP 3

Manage the **physical setup** of all vendor services, confirming equipment delivery and pickup schedules for each customer site.

STEP 4

Receive, process, and confirm **service requests** through RUBICONConnect, Rubicon's customer app and web-based portal.

STEP 5

Consolidate **invoices processing** by capturing weights via tracking software, confirming accuracy, and managing payments.

STEP 6

Generate **verified reporting** on consolidated raw data for tonnage of material diverted from the landfill, by location, for sustainability certifications.
